PLACE AND ROLE OF ECONOMIC RELATIONS IN THE SYSTEM OF EDUCATION SERVICES

Maqolada ta`lim xizmatlari bozoridagi iqtisodiy munosabatlarni takomillashtirish, uning ob`ekti bo`lgan ta`lim xizmatlarining mohiyati va tarkibini tadqiq etish zaruratini keltirib chiqaradi. Chunki, ta`lim xizmatlari bozori ta`lim xizmatlarini ayirboshlash tizimidir. Aynan ta`lim xizmatlariga talab va taklif o`rtasida bozor muvozanatiga erishish ta`lim xizmatlari bozori shakllanishi va rivojlanishining asosiy iqtisodiy sharti hisoblanadi.

Статья, рассматривать улучшение экономических отношений на рынке образовательных услуг, а также образовательные услуги в природе объектов и необходимость изучения состава индивида. Поскольку рынка образовательных услуг системы обмена образовательных услуг. Это баланс между спросом и предложением на рынке образовательных услуг для достижения формирования рынка образовательных услуг и развитие основного экономического состояния.

Key words: *educational market, educational services, trade, investment, private and corporate mechanisms, ensuring the autonomy of institutions of higher education, to ensure the activities of higher education institutions based on innovation, market principles, and educational services the improvement of economic relations in the market.*

The features of the emerging global education market based on competition. A variety of economic science education system in the micro and macro-degree's of place, and those who study economic aspects.

The seventeenth century to the early twentieth century, 60 years of economic and scientific education system and the importance of its role in the economy can come to the following conclusions, on the basis of the views : they provide social and economic development, labor productivity, and the value of human resources, and ultimately increase the wealth of the nation those who study the issues related to the importance of the knowledge and skills, Their works exactly the "education system", the "human capital" as they bring knowledge, skills and master the concepts[1].

However, if we have the knowledge, training, skills and education Given that the products in which they implied that "education" and "human capital" to reflect on the concept of mean.

☒ Analysis of economic scientists in the above-mentioned ideas, "human capital," the theoretical basis of the concept.

60 years of the twentieth century, human civilization has undergone fundamental changes. As a result, the general theory of economic growth as part of the "new economy" theory began to take shape.

The basis of his "human capital" concept, and it is a source of increasing the income of the people and society. Educational services market is an important element of the national market.

Therefore, the education market is important to study the role of the national economy (Figure 1). Educational services offered by the institutions of the educational system and the demand for education services market matures.

Taking into account the unique features of the field of education (educational services that mix ne`mat) public education services to consumers and at the same time appears as a service provider.

Education in all sectors of the national economy, skilled labor force and production will be involved again.

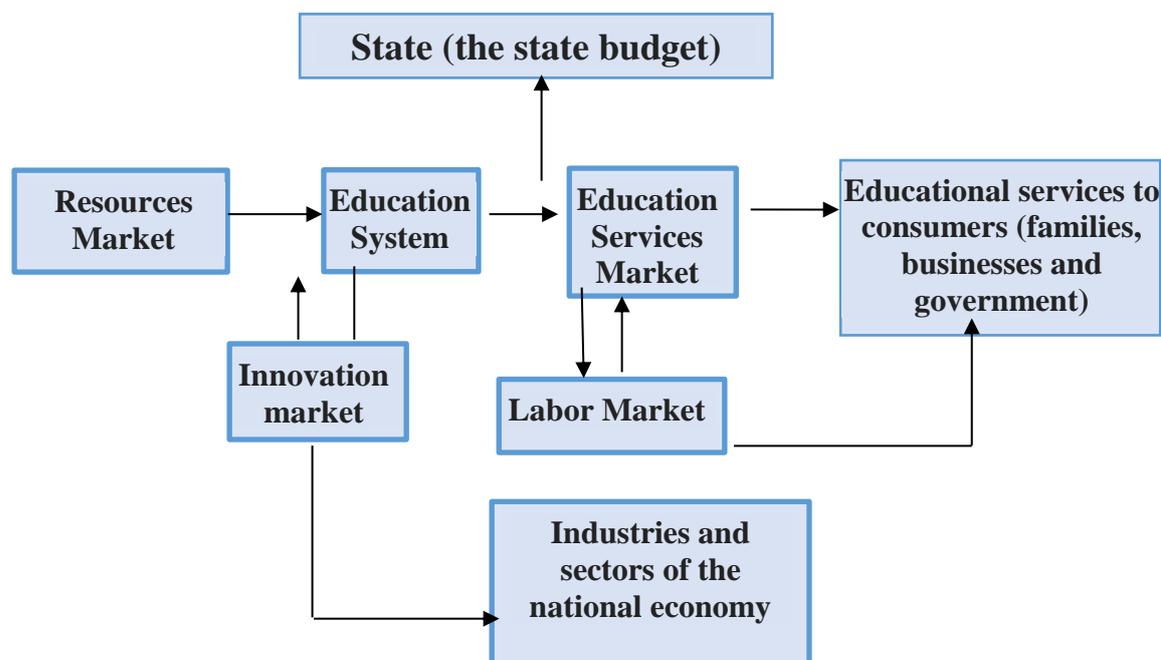

Figure 1. The role of the educational services market in the national economy

If the state's education costs exceed 5% of the gross domestic product, and will be involved in the degradation of the nation's intellectual development is considered as a risk.

Educational services to consumers (families, businesses and the state of the market), so education is one of the priorities for improving the system of economic relations that the educational services market is to coordinate the needs of the labor market.

Educational services market and perfect the policy of the state in development and implementation of new financing mechanisms. Educational services market is one of the priorities of improving economic relations.

The effective use of the educational system of the state budget, as well as the improvement of the mechanisms of extra-budgetary funds, private investment and corporate important role in the development of mechanisms.

This practice in the field of mechanisms to improve the overall financial and economic situation as well as it increases the flexibility of the requirements of the labor market, which will improve the quality of education.

The financing of the education system of the state higher education system will require new approaches. State to find ways of further development of higher education institutions and the development of entrepreneurship should be encouraged.

Know, the state higher education system in the world, promoting the economic aspects of growing. The main reasons are the following: the developed countries in this sector by the state system of higher education autonomy and decentralization of the regulation to establish a reasonable ratio between the major and important; financing from the state budget and off-budget financing of higher education to try to find a reasonable rate; ensuring transparency in the financing of higher education institutions.

Republic of educational services available in the current market mechanism can not ensure the effective functioning of the institutions of higher education. In this regard, the establishment of non-state higher education institutions to meet the demand for higher education, the formation of healthy competition between higher education institutions and improve the quality of education[3].

In addition to continuing education at higher education institutions, firms and companies within the education, training, skills development available to increase the amount of information and a certain time become outdated.

Therefore, to provide continuing education for private and other forms of property is desirable to encourage the establishment of educational institutions.

To improve the skills of their staff to meet the demands of their professional work, which requires the continuous improvement of the educational infrastructure. Its main elements are as follows: on the basis of the principles of modular vocational training, retraining and skills development programs; the implementation of these programs to different types of property-based organizations and institutions; training, re-training and professional development, professional skills formation, is looking for a technology that meets the requirements of education and competition, aimed at assessing the quality of the educational programs of socio-professional organizations;

organizations carrying out educational programs must include an evaluation of the quality of education.

Professor teacher's employed in the system of education and social status, and to implement a number of measures to improve the financial situation: the amount of the average salary of professors and teachers, step-by-step up its economy not less than the average wage level; additional financial incentives for a certain period, depending on the results of the activities of the teacher to set up the implementation of differentiated; Professors and teachers of legal and social protection systems; teaching and scientific research should be carried out to practice driving mechanism. In addition, the knowledge they engaged in public utilities, transportation, taxes and other payments for the purpose of benefits; Professors and teachers in order to support social enterprises, business sub`ektlarining funds involved in the development and practical implementation of the mechanism; teachers training system, staff training in order to ensure the timely and effective implementation of the basic rate remained at work during the training set to pay a certain amount of the scholarship.

Ensuring the autonomy of institutions of higher education in the country for the purpose of carrying out the following activities: the number of students in higher education institutions the right to determine the price and payment on the basis of step-by-step the responsibility of the institutions of higher education; institutions of higher education in the elimination of direct and indirect barriers that restrict the use of financial resources as well as to institutions of higher education from the state budget allocated funds for the effective use mas`uliyatlarini; higher education institutions in the inter-budgetary relations and transparency of financial activities; mechanism for the agreement to finance the higher education system, that is based on the results of the activities of public higher education institutions allocate financial resources are differentiated on the basis of a contract; In addition to higher education institutions to promote educational services provided[2].

In order to ensure the activities of higher education institutions based on innovation is proposed to implement the following measures: creation of a variety of technologies providing improvement projects; basic and applied research is conducted in the description of the creation of the conditions necessary for; providing the educational process and the integration of research projects to develop educational technologies. The period of the country's economic reforms and the modernization of the economy is one of the urgent problems in the educational services market formation and the development of effective.

Educational services to achieve economic relations and improving the competitiveness of the market, based on the principles of market economy and skilled workforce management experts associated with the formation and reproduction.

In fact, the labor force in the labor market demand for knowledge, a certain profession, vocational training should be. These processes are the President of the Republic of Uzbekistan Islam Karimov "It is no secret that we are living in the twenty-first century wealth -intellektual dominate. Anyone who is not aware of the fact that this time, the intellectual pursuit of wealth for the nation and state, the content of the daily life turnover such a backwards way of the development of the state of the world is inevitable, "are giving great attention to human capital [3]. Improvement of economic relations in the market of educational services, ob education necessitates the study of the nature and composition of services. Because the educational services market system of exchange of educational services. It is the balance between supply and demand for education services market to achieve the educational services market formation and development of the basic economic condition.
